

Coaxial Fiber Optic Cable Strippers

AI Overview

Fiber optic and coaxial cable strippers are precision tools designed to remove cable jackets, coatings, and buffer layers without damaging the underlying conductors or fibers.

Fiber Optic Cable Strippers

Fiber optic strippers are specialized tools used to remove the protective coatings from optical fibers to expose the bare glass for splicing, termination, or testing. They are designed to handle delicate fibers without scratching or nicking the glass, which is typically 125 μm in diameter with coatings around 250 μm . Key types and features include:

- **Mechanical Strippers:** Handheld tools with precision slots to strip the jacket, primary coating, or secondary coating. Examples include the Jonard Tools JIC-375, which has three holes for stripping 1.6–3.0 mm jackets, 600–900 μm buffer coatings, and 250 μm acrylate coatings.
- **Mid-Span Slit and Ring Tools:** Tools like the MS-306 allow radial/ring cuts and longitudinal slits for accessing fibers in outer jackets or buffer tubes, ideal for mid-span access.
- **Specialized Scissors:** Tools such as the CFS-2 fiber cable cutting scissors use a three-hole segmented design to strip 125 μm fibers and 250 μm cladding quickly and accurately.
- **Adjustable and Multi-Diameter Tools:** Some strippers, like the CST-4000, feature adjustable blades and spring-loaded designs for stripping large round cables (19–40 mm diameter) with longitudinal, spiral, or circular cuts.
