

Connecting China Telecom fiber optic cable and router

AI Overview

To connect a China Telecom fiber optic cable to your router, you must use an Optical Network Terminal (ONT) to convert the fiber signal into an Ethernet signal that your router can use.

Required Equipment

- **Optical Network Terminal (ONT):** Provided by China Telecom, this device converts the incoming fiber optic signal into an electrical signal compatible with your router .
- **Fiber Optic Cable:** Usually pre-terminated by your ISP, with SC/APC or SC/UPC connectors .
- **Router:** Ensure it has a WAN or Internet port to connect to the ONT. Fiber-ready routers with gigabit support are recommended for optimal speeds .
- **Ethernet Cable (Cat5e or higher):** Connects the ONT to the router .

Step-by-Step Connection Process

- **Locate the Fiber Termination Point:** China Telecom typically installs a fiber wall outlet or Fiber Termination Point (FTP) where the fiber enters your home .
- **Connect Fiber Cable to ONT:** Remove protective caps from both the fiber cable and the ONT port. Carefully insert the fiber cable into the ONT's optical port, aligning the connector key until it clicks securely . Avoid bending or touching the fiber tip.
- **Power On the ONT:** Plug the ONT into a power source. Wait for the status lights to stabilize, indicating a successful connection to the China Telecom network .
