

Distribution box with control panel

AI Overview

A distribution box with a control panel safely distributes electrical power while allowing monitoring and control of circuits for homes, industries, or hazardous areas.

Overview

A distribution box (DB box) is a central hub that receives electrical power from a single source and distributes it to multiple circuits, ensuring safe and organized power management for homes, offices, or industrial facilities . When combined with a control panel, it not only distributes power but also allows monitoring, control, and automation of electrical systems .

Components

Typical components of a distribution box with a control panel include:

- Circuit breakers and fuses: Protect circuits from overloads and short circuits .
- Bus bars: Distribute current efficiently to multiple circuits .
- Indication lights: Show the status of mains power supply .
- Control devices: Relays, contactors, motor starters, and switches for managing connected equipment .
- Smart modules: Energy monitoring units, communication modules, and digital control interfaces for remote management .
