

Dual power supply box number

Overview

ODPSE230C is used to provide power supply for motorized switches and breakers by using two lines, Line I and Line II. A green LED light for Line I and Line II indicates that voltage is between specified range. In case of anomaly LEDs are switched OFF. This guide aims to simplify your decision-making process and help you choose the dual power supply box that best fits your needs. Specified voltage range is 80% - 120 % x rated. A dual power switch box seamlessly avoids such situations by automatically switching over to a backup source within seconds. But what are the behind mechanisms?

Let's delve deeper! Dual isolated output power supplies may be connected to provide any desired arrangement of positive and negative output voltages. In this article we will explore $\pm$ (5V, 12V, 15V, 24V and adjustable 1.
