

Dual power supply for access switch

Overview

The switch chassis has two power supply slots that operates with either one active power supply module and a redundant power supply module. The active and redundant modules must be of the same type. Network switches are the unsung heroes of our digital lives. They tirelessly route data packets, keeping our homes, businesses, and the entire internet humming. All power supply modules have. The DPS-520 offers uninterrupted operation for up to x4 D-Link switches and in the event of a power failure, it will be immediately activated, allowing your business to stay operational. It supports VLAN segmentation and port mirroring for simplified management and maintenance, and also supports LACP (link aggregation. Easy to Use: Unmanaged Plug and Play, just plug in the power cord, connect the ethernet cable to your device, can be used without configuration. It is designed to meet the needs of the most demanding workgroup and. Do you truly need dual power supplies?

You could purchase a Cisco C1000 series that would be cheaper and just have a shelf spare in the event an OOB management switch failed.
