

Fiber optic patch cord coupling fiber lc

AI Overview

LC-to-LC fiber optic patch cords are standardized cables with LC connectors on both ends, designed for high-density, reliable optical connections in data centers and telecom networks.

Overview of LC-to-LC Patch Cords

An LC-to-LC fiber patch cord is a fiber optic cable terminated with LC (Lucent Connector) connectors on both ends, enabling direct coupling between devices or patch panels (). LC connectors are compact, with a 1.25 mm ferrule, half the size of SC connectors, allowing high port density in racks and panels (). They use a push-pull latch mechanism for secure connections and are suitable for both single-mode (SM) and multimode (MM) fiber types ().

Key Features

- High-density design: Ideal for data centers and telecom environments where space is limited ().
- Low insertion loss: Ensures minimal signal degradation across thousands of mating cycles ().
- Durable construction: Often reinforced with Kevlar yarn for strength and protection under real-world handling ().
- Versatile applications: Used for intra-rack connections, inter-rack patching, cross-connects, and FTTH/building entry points ().
