

Home Fiber Optic Router Configuration Method

AI Overview

To configure a home fiber optic router, connect the ONT to your router via Ethernet, access the router's admin panel, input ISP credentials, set up Wi-Fi, and update firmware for optimal performance.

Step 1: Prepare Your Equipment

- Optical Network Terminal (ONT): Provided by your ISP, converts fiber signals to Ethernet .
- Router: Ensure it supports fiber input (WAN or SFP port) .
- Cables: Fiber optic cable (SC/APC or SC/UPC connectors) and Ethernet cable .
- Power adapters: For both ONT and router.

Step 2: Connect the Fiber Line

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's designated port.
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes) .

Step 3: Connect the Router

- Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port .
