

Home electrical distribution box location

AI Overview

The main electrical distribution box, or breaker panel, is typically located in the basement, garage, utility room, or mounted outside near the electric meter.

Typical Locations

Most homes place the main service panel in areas that are accessible but out of the way of daily living spaces. Common locations include:

- Basement: Often along a wall near where the electrical service enters the home .
- Garage: Mounted on an interior wall, sometimes near a workbench or storage area .
- Utility Room or Laundry Room: Convenient for maintenance and access to other utilities .
- Exterior Wall: Near the electric meter, sometimes in a weatherproof enclosure .

Identifying the Panel

The main panel is usually a rectangular gray metal box about the size of a medicine cabinet, with a hinged door. Inside, you'll find:

- Circuit breakers: Switches controlling individual circuits throughout the house .
- Main breaker: A larger switch labeled “Main” or “Service Disconnect” that controls power to the entire home . Some homes may also have subpanels, smaller panels that control circuits in garages, workshops, or outbuildings, but the main panel is the primary distribution point .
