

How long can a household electrical distribution box be used

Overview

You can generally expect a power distribution box to last anywhere between 8 to 15 years, depending on the application it's being used for, the environment it's operating in, and how frequently it's serviced. On average, a home electrical panel can last between 25 to 40 years. If yours is approaching or past that range, replacement should be a serious consideration. Older panels were not built to handle the demand of modern homes, where we run everything from smart appliances to multiple HVAC systems and chargers. Keep in mind that some boxes fail or age prematurely, so there are no guarantees here, but you don't need to annually replace.
