

New Power Distribution Box in Gabon

AI Overview

Gabon is actively upgrading its electrical infrastructure with new power distribution boxes and related equipment to improve grid reliability and expand electrification.

Recent Installations and Deliveries

In August 2026, Gabon received a significant shipment of electrical equipment aimed at strengthening power production and distribution in 18 localities, including Tchibanga in Nyanga province. This shipment included power distribution boxes, 31 new Caterpillar generators, transformers, and protective devices. The initiative is part of a national strategy to address chronic energy shortages and ensure reliable electricity access for both urban and rural populations, with rapid deployment already underway under the supervision of the Ministry of Universal Access to Water and Energy (MAUEE) and technical teams on the ground .

Suppliers and Manufacturing

Gabon's power distribution boxes are supplied by both local and international manufacturers. The Gabon Power Company (GPC) oversees electricity infrastructure projects, while specialized factories like HLC Sheet Metal Factory provide metal surface treatment and assembly services for distribution equipment. The market for electric transmission and distribution equipment in Gabon has been monitored for trends, with suppliers offering a range of distribution boxes suitable for commercial and rural applications . Interested parties can contact suppliers directly for procurement and technical specifications.
