

Portuguese server rack explosion-proof type

AI Overview

Explosion-proof server racks for hazardous environments in Portugal are available with ATEX certification, IP66 protection, and stainless steel construction for maximum safety and durability.

Overview

Explosion-proof server racks are designed to prevent internal sparks or explosions from spreading to the surrounding environment, making them essential for industrial, chemical, oil & gas, and offshore applications . These racks are typically made of stainless steel (AISI 304L or 316L) and feature IP66-rated seals, ensuring protection against dust, water, and corrosive conditions . They are suitable for both indoor and outdoor use in harsh environments.

Key Features

- **ATEX Certification:** Many racks comply with ATEX zones 1, 2, 21, and 22, ensuring safety in explosive atmospheres .
- **Robust Construction:** Stainless steel body with polished or brushed finish, monobloc design, and reinforced doors for impact resistance .
- **Sealing and Pressurization:** Foam-in-place gaskets, screw-down clamps, and pressurization devices maintain a secure, water-tight seal .
- **Temperature Range:** Typically operate from -25°C to +60°C, with some components rated up to +180°C .
