

Price of retrofitting a 12V fiber optic cable puller

AI Overview

Retrofitting a 12V fiber optic cable puller typically ranges from \$500 to \$2,500 depending on the model, labor, and components required.

Cost Overview

The price of retrofitting a fiber optic cable puller to 12V depends on several factors: the existing puller type, whether it is manual, electric, or hydraulic, and the complexity of the retrofit. Standard fiber optic cable pullers can cost \$26,000 on average for purchase, with rental options around \$300/day or \$3,075/month for professional-grade units . Retrofitting a unit to 12V usually involves installing a 12V motor or battery system, compatible controllers, and possibly capstan modifications .

Retrofitting Considerations

- **Motor and Power Supply:** Converting to 12V requires a motor compatible with 12V DC and a rechargeable battery system. Lithium-ion or lead-acid batteries are commonly used.
- **Control System:** A handheld or foot-operated controller may need replacement or adjustment to handle 12V operation safely.
- **Capstan and Tension Adjustments:** Ensure the capstan can handle the same pulling force without exceeding cable tension limits, typically below 600 lbs for standard fiber .
