

Server optical module speed limit

Overview

This optical module speed guide covers transceiver speeds from 1G to 400G, offering technical details, deployment scenarios, and decision criteria to help select the right modules for your network. SFP (Small Form-factor Pluggable) optical modules are compact, hot-pluggable transceivers that enable network equipment to connect seamlessly to fiber and copper links. When used with Intel® Ethernet Network Adapters with QSFP28 connectivity, these optics provide interoperability and secure connections for virtualization, high-speed networking, and consistently reliable performance. SFP optics can support a range of speeds, from 100 Mbps to 25 Gbps or higher. It is important to refer to the datasheet or specifications of the specific SFP optic to determine its maximum supported.

SFP transceivers are available with a variety of transmitter and receiver specifications, allowing users to select the appropriate transceiver for each link to provide the required optical or electrical reach over the available media type (e.g. twisted pair or twinaxial copper cables, multi-mode or single-mode fiber cables). Transceivers are also designated by their transmission speed. SFP modules are commonly available in se
