

Small busbar unit

AI Overview

A small busbar unit is a compact, modular electrical distribution system designed for low-power applications, typically ranging from 25A to 160A, providing safe and efficient power distribution in industrial, commercial, or service environments.

Overview

A small busbar unit, often referred to as a low-power busbar trunking system, is used to distribute electrical power from a main supply to multiple outgoing circuits efficiently. These units are modular, allowing easy expansion or reconfiguration, and are suitable for applications such as lighting, small machinery, or intelligent lighting systems with DALI or 0-10V protocols (BTicino) .

Key Features

- **Current Ratings:** Typically from 25A to 160A for small units, with tap-off units rated 16A to 63A for flexible connections (Schneider Electric) .
- **Conductor Materials:** Copper or aluminum conductors are commonly used, offering high conductivity and reliability (RS, BTicino) .
- **Modularity:** Units are composed of main rectilinear elements to which devices like tap-off boxes, shunt devices, or flexible connectors can be attached, enabling easy system expansion or maintenance (BTicino) .
- **Protection and Standards:** Small busbar units often comply with IEC EN 61439-6 standards, with IP20 to IP55 protection ratings, ensuring safety against contact hazards and environmental factors (BTicino) .
