

Sri Lanka Bus Connector Temperature Measurement Cost

AI Overview

Temperature measurement and calibration for bus connectors in Sri Lanka typically ranges from LKR 5,000 to LKR 20,000 per device, depending on the sensor type, calibration points, and service provider.

Temperature Measurement Services

In Sri Lanka, temperature measurement for industrial applications, including bus connectors, can be performed using thermocouples, RTDs, or digital temperature sensors. Providers such as Accura M.E.C and Lanka Calibration Services offer ISO/IEC 17025-accredited calibration services for thermometers, RTDs, thermocouples, and data loggers, ensuring traceability to national and international standards. The Measurement Units, Standards & Services Department (MUSSD) also provides calibration services based on the International Temperature Scale of 1990 (ITS-90), which is widely recognized for accuracy.

Cost Considerations

- **Base Calibration Fee:** Most laboratories charge a standard fee for up to five calibration points. For example, MUSSD notes that additional points beyond five incur an extra 20% of the total calibration fee.
- **Sensor Type:** Costs vary depending on whether the sensor is a thermocouple, RTD, or digital sensor. Standard RTDs and thermocouples are commonly used for bus connectors and industrial equipment.
