

The power distribution box alarm is beeping

AI Overview

A beeping power distribution box alarm usually indicates a loss of AC power or a low backup battery, and can be silenced by acknowledging the alert or replacing the battery.

Common Causes

- **Loss of AC Power:** When the main power supply is interrupted, the system switches to its internal backup battery. The beeping serves as a warning that the system is running on limited battery power .
- **Low or Failing Backup Battery:** If the backup battery is old or weak, it may trigger a persistent low-battery alert even after power is restored . This is common if the battery has reached the end of its service life or has been stressed by a prolonged outage .

How to Silence the Alarm

- **Acknowledge the Alert:** Enter your system's user code on the keypad or touchscreen panel, often followed by a specific key such as 'disarm' or 'star'. This confirms to the system that you are aware of the power issue and temporarily stops the beeping .
- **Check Power Supply:** Ensure the system is properly connected to AC power. If the outlet or circuit is faulty, the system may continue to beep .
